

Organisation for Psychological Research into Stroke (OPsyRIS) Meeting

Organisation for Psychological Research into Stroke

An interdisciplinary forum for all things psychology in stroke

Save the date: **Tuesday 8th of December 2026 9:00am AEST** - Online

Keynote Speaker: Dr Joshua Blake

Dr Joshua Blake is a Lecturer in Clinical Psychology at University of East Anglia (UEA), UK. Josh's research interests are in post-stroke mood disorders, with a focus on improving the availability of accessible assessments and developing understanding of lesser recognised psychological conditions. These interests started during his master's studies in Applied Neuropsychology at University of Bristol and continued to grow as he completed his clinical psychology training at UEA. During his doctoral studies, Josh developed a keen interest in using psychometrics to both improve availability of outcome measures and also to use these techniques to understand more about the phenomenology of mood disorders. More recently, Josh's research has been focusing on improving psychological understanding of post-stroke emotionalism (emotional lability) and post-stroke worry and anxiety.

Registrations now open

Register to add a calendar invite and stay updated as the program becomes available – [Organisation for Psychological Research into Stroke \(OPsyRIS\)- Forum](#)

Abstract submissions now open

15 minute platform talks, 7 minute lightning talks
